

About

ConcreteCMS SAML Service provider package is an OASIS SAML v2.0 specifications compliant . It offers an elegant and easy configurable support for your ConcreteCMS Website or Application to use the Security Assertion Markup Language (SAML) as an authentication scheme for **Single Sign-On (SSO)**, using information that your supported identity provider (IdP) supplies and provide you access to Cloud and intranet websites using a single credentials entry.

This package will make your ConcreteCMS acts as a SAML Service Provider (SP) which can be configured to establish trust between ConcreteCMS and a SAML compliant Identity Provider (IdP) to securely authenticate users.

It supports all known SAML2 Identity providers and It has been tested with various IdPs : Okta, OneLogin, OAuth

This tool are meant solely to support individuals who have taken the time to read and understand the SAML specifications and a good solution for those looking for a quick way to implement SAML .

If you need some highly custom SAML more secure implementation or/and adding some new other features .

Please feel free to contact us .

Features

- Out of the box support of SAML 2.0 specification .
- Simple yet highly configurable with easy Installation and Setup
- Complete and detailed documentation
- Supports all SAML-compliant identity providers (OKTA, OneLogin, Keyloak...) .
